SORTED FAMILY

Family life. Sorted.

Your family's information, *kept private & protected*

Everything you put into SORTED Family belongs to your household, and to no one else.

Only your household

Calendars, bills, budgets, notes, recipes, photos and messages are visible only to the people in your household. Other SORTED Family members can't see them.

You choose who sees what

Grown-ups can hide sections like Budget, Bills or Health from any family member. The system itself refuses to send hidden information to that person.

Locked private notes

Lock a note so only you can open it, with your own PIN (it locks after 5 wrong tries), plus Face ID on your phone.

Private photos & files

Photos and documents sit in private storage. They are never public links anyone could stumble on.

Recipes made on your phone

Recipe PDFs are created right on your own device, so they aren't sent to an outside document service.

Never sold

Your family's details are yours. We don't sell them or share them with advertisers.

The technical protection

256-bit AES

Stored information is encrypted at rest with AES-256, the standard used by banks and governments.

TLS / HTTPS

Everything between your phone and our system travels over an encrypted, secure connection.

Hashed passwords

Passwords and note PINs are stored scrambled with bcrypt, so they can't be read, even by us.

Row-level security

Every request is checked against your household and permissions inside the database itself.

Secure hosting

Managed, professionally secured cloud servers.

Separate staff area

Our team's support system is kept apart from family accounts.

Get your family sorted, safely.
